DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 31-50 are rejected under 35 U.S.C. 102(e) as being anticipated by Yamazaki et al. (US 6,603,453, hereinafter Yamazaki.)

The applied reference has a common inventor with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

In regard to claims 31, 33, 36, 39, 42, 45, 48 in fig. 1, Yamazaki discloses a method comprising:

a process of forming a first wiring line 103 and 104 on a substrate 101,

a process of forming a first insulating layer 105 on the first wiring line,

a process of forming an active layer 107 of the n-channel TFT and an active layer 106 of the p-channel layer, and

a process of forming a second wiring line 113 on the second insulating layer,
a process of forming an LDD region on the active layer of the n-channel TFT; and
the LDD region is provided overlap the first wiring line and not overlap the
second wiring line; see above-mentioned figure for clarity.

In regard to claims 32, 34, 35, 37-38, 40-41, 43-44, 46-47, 49-50 Yamazaki further discloses that the first wiring line is formed by a conductive film mainly containing Ta; see col. 30, lines 35-40.
